Genes with similarity to proteins in the databases are described as
'putative', '-lke' or 'similar to'. Genes that have EST
similarity but no significant protein similarity are described as
'unknown proteins'. Genes that are annotated based only on gene
prediction software are described as 'hypothetical proteins'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/section/index.html), GENSCAN (Chris Burge,
http://gnomic.stanford.edu/~chris/GENSCANW.html), Fexa (V.Solovyev
& A.Salamov, Sanger Centre, http://genomic.stanford.edu/~chris/GENSCANW.html),
Bender (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.dk/NetPlantGene.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Federspiel, N.A., Palm, C.J., Conway, A.B., Conn, L., Hansen, N.F., Altafi, H., Araujo, R., Huizar, L., Rowley, D., Buehler, E., Dunn, P., Gonzalez, A., Kremenetskaia, I., Kim, C., Lenz, C., Li, J., Liu, S., Luros, S., Schwartz, J., Shinn, P., Toriumi, M., Vyotskaia, V., Walker, M., Yu, G., Ecker, J., Theologis, A. and Davis, R.W.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -2NM13 to M13rev of the BAC clone. This sequence of OJ1293_EO4 clone has an overlap with OSAUBBAOS3LI1 (DDBB: AP005691) clone at 5' end and with P0643F09 (DDBJ: AP005111) at 3' end. The sequence was generated by combining Monsanto and RGP-dapan sequencing data. Detailed information on or tring entry maility troopther with annotarion of this entry

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (http://globin.cse.psu.edu/html/docs/sim4.html), gap2
(http://www.tigr.org/software/glimmerm/), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cNNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTY. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by a single gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a miscellaneous feature of the sequence.

The crientarion of the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The orientation of the sequence is from -21M13 to M13rev of the clone. This sequence of OSJNBa0053L11 clone has an overlap with P0016F11 (DBD; AP005303) clone at 5' end and with OJ1293_E04 (DBD: AP004120) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved. ocation/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC polynuclectides encoding the plant sterol acyltransferases LCAT
CC (AASO01081-AASO1104, AASO1311) and ACAT (acyl CoA:cholesterol
CC acyltransferase-like; AASO1311-AASO1319) are described. A yeast LCAT
CC acyltransferase-like; AASO1311-AASO1319) are described. A yeast LCAT
CC related open reading frame, LRO1 gene sequence (AASO1342), and a rat ACAT
CC (AASO1105) cDNA sequence are also described. The polynucleotides encoding
CC LCAT or ACAT are used to produce LCAT or ACAT polypeptides. They can also
be used in a recombinant construct to transform a host cell (preferably
CC of a plant) or a plant. The recombinant construct is used to increase or
CC decrease the sterol content of the host cell or plant. It can be used to
CC alter oil production of the cell or plant, preferably by increasing it.
CC The oil of the plant or the plant itself is used as a food product, or as
CC nutritional or dietary supplements, or in pharmaceutical compositions for
CC obstitute cooking oil, and dressings e.g. salad dressings, mayonnaise,
CC butter, cooking oil, and dressings e.g. salad dressings, mayonnaise,
CC cheese, processed meat, pasta, sauces, cereals, desserte, dips, chips,
CC baked goods, pastries, cookies, snack bars, confections, chocolates, and
CC provide a plant with tolerance to stress and insect damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid encoding plant lecithin:cholesterol acyltransferase acyltransferase-like or acyl (coenzyme A) CoA:cholesterol acyltransferase-like polypeptides, for modifying the sterol content and oil production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1641
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes for Arabidopsis thaliana lecithin:cholesterol acyltransferase-like 2 (LCAT2). RESULT
The present invention describes a nucleotide sequence (I) derived from a CC nucleotide sequence encoding an acyltransferase polypeptide comprising at C2 least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one CC amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase CC polypeptide, where the encoded active membrane independent CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, carylated carbohydrates and acylated anno acids. Also described: (I) a CC acylated carbohydrates and acylated mino acids. Also described: (I) a CC acylated carbohydrates and acylated mino acids. Also described: (I) a CC which functions in a host, where the promoter region is operably linked to at least one promoter region which is operably linked to at least one non-cc translated region which functions in a host; (2) a vector comprising (II) (3) a host cell comprising (II) or the vector; (4) producing an comproved active membrane independent acyltransferase polypeptide,
                                                                                                                                                                                                                                                                                                                                                                        New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-MAY-2002; 2002SE-00001581.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and recovering the host cell culture and recovering the story transferase polypeptide; (5) a polypeptide obtained by the method in (4), where the polypeptide at least is an improved active membrane independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridiaing to (1) under stringent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid molecule (1) and the polypeptide are useful in producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids present in animal and plant raw material. The present sequence is used in the exemplification of the present invention.

Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to increase oil content.

WPI; 2000-665012/64.

Claim 6; Page 60-61; 97pp; English

The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence represents the Arabidopsis thaliana PDAT genomic DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                        The present invention describes an enzyme for catalysing (in an acyl-Co independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (PAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content this cell or organism. The present sequence represents the Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                               Phospholipid:diacylglycerol pathway for triacylglycerol producing triacylglycerol, cincrease oil content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-APR-1999;

Several novel polynucleotides encoding the plant sterol CC acyltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC) acyltransferases LCAT (AASO01081-AASO1104, AASO1341) and ACAT (acyl CC) arat ACAT (AASO1105) cDNA sequence are also described. Acc yeast LCAT related open reading frame, LRO1 gene sequence (AASO1342), and CC polynucleotides encoding LCAT or ACAT are used to produce LCAT or ACAT (Dephylogoptides. They can also be used in a recombinant construct to polypeptides. They can also be used in a recombinant construct of the host construct is used to increase or decrease the sterol content of the host cell or plant. It can be used to alter oil production of the cell or cell or plant. It can be used to alter oil production of the plant or the plant of the plant 
                                                                                                                        S
                                                                                                                                                                    밁

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell and a growth medium preparing a cell culture, culturing the host cell culture and harvesting the cell culture and recovering the improved active membrane independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in CC (4), where the polypeptide at least is an improved active membrane comprising the above polypeptide; (6) an oligonucleotide specifically hybridising to (I) under stringent conditions; and (7) a kit comprising the above polypeptide are useful in producing structured comprising lipids present in animal and plant raw material. The present condifying lipids present in animal and plant raw material. The present conditions is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-MAY-2002; 2002SE-00001581

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC harvesting the organisms. Specifically, it refers to nucleic acid CC sequences encoding polypeptides with acyltransferase activity, in CC particular, lysophosphatidic acid acyltransferase activity, in CC particular, lysophosphatidic acid acyltransferase glycerol-3-phosphate CC acyltransferase, diacylglycerol acyltransferase or lecithin-cholesterol cacyltransferase. In addition, nucleic acids that encode proteins involved in lipid or fatty acid metabolism may be included such as acyl-COA CC dehydrogenase, fatty acid hydroxylase or acyl-acyl carrier protein CC desaturase. The present invention describes long chain multiply CC unsaturated fatty acids (Carbon 18, C20, C22 or C24 acids) that are CC eicosapentaenoic and docosahexaenoic acids, where the organisms are CC eicosapentaenoic and docosahexaenoic acids, where the organisms are CC caids, oils or lipids, including the derived compositions, can be used in animal or human foods, cosmetics and pharmaceuticals, as well as for CS synthetic intermediates. This polynucleotide sequence is the Fusarium CC graminaeum lecithin-cholesterol acyltransferase (LCAT) cDNA clone (coding CC sequence) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-651-651-5 (1-546) x ADT99409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method for preparing polyunsaturated fatty acids (PUFAs) in a transgenic non-human organism by the introduction of any of 20 specific nucleic acid sequences, their derivatives or homologues thereof, followed by culturing and then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preparing cosmetics
